

KELLER

ARC-1 Cellular data communication protocol (GSM/UMTS/LTE)

Client: Keller AG für Druckmesstechnik

Document typ Documentation

Titel: Cellular data communication protocol

Product: ARC-1

File name: ARC-1 Cellular data communication protocol v1.00a

Version: 1.00a

Place, Date: Winterthur, 24.05.2018

TABLE OF CONTENTS

1	Commands.....	1
1.1	Syntax (General structure)	1
1.1.1	Example how the structure will look like (configuration):	1
1.1.2	Limitation.....	1
1.2	Command table for E-Mail / FTP	2
1.2.1	General Content	2
1.2.2	Configuration.....	5
1.2.3	Execute specific functions of the ARC-1 via remote access	12
2	Record EEPROM (Memory-Map).....	13
2.1	Header	13
2.2	Data packet.....	14
3	Overview message type	15
4	SMS.....	16
4.1	Description of the data format.....	16
4.2	General Settings	17
4.2.1	“Measure”	17
4.2.2	“Info”	18
4.2.3	“Alarm”	18
4.2.4	“Check”	19
5	FTP / E-Mail	20
5.1	Description of the data format / storage	20
5.1.1	FTP (recommended)	20
5.1.2	E-Mail.....	20
5.2	General Settings (used for these examples).....	21
5.2.1	Communication	21
5.2.2	Channels	21
5.3	Measure “#F/a” / “#F/e”	22
5.3.1	With “Record function” in Base64 “#F/e” (recommended)	22
5.3.2	In plain text “#F/a” (not recommended).....	23
5.4	Info “#F/b”	24
5.5	Alarm “#F/c”	25
5.6	Check “#F/d” / “#F/f” / “#F/g”	26
5.6.1	Request missing Record data	26

5.6.2	Get "Error" Report.....	28
6	Device type overview	30
7	Decoding Base64	33
7.1	Example Measurement file (record activated):.....	33
7.2	Converted BASE64 (green) to Decimal (red) code:	33
7.3	Interpretation:.....	33
8	CRC16	34
9	Revision History.....	35

1 COMMANDS

The ARC-1 can be controlled / configured via the cellular interface using the ARC-1 specific commands.

1.1 Syntax (General structure)

```
# <command> / <variable name1> = [<+, ->] <variable value 1> [/] [<variable name 2>] [=] [[<+, ->]] [<variable value 2>]
```

Characters	Description
#	start pattern of each command
<command>	Defines the superordinate function from the command table (one letter) / 0...9, a...z, A...Z
/	delimiters of different data containers
<variable name>	Defines the subordinated command (one letter) / 0...9, a...z, A...Z
=	Separator for the associated value of the subordinated command
[<+, ->]	sign of the variable value (not required for strings)
<variable value>	value or string of <variable name> / "space" to "z" (32 ... 122)

1.1.1 Example how the structure will look like (configuration):

```
#F/d=0#T/s=581094554/p=18.05.31,17:08:58+08#M/a=-0.9611795+0.0002412+26.698974+0.9614199+28.260000+0.0005353+0.0003824/c=+1+d=-0.9611795+0.0002412+OFL+OFL+26.698974+OFL+0.9614199+28.260000+0.0005353+0.0003824#l/n=5/s=24/b=96/e=9.20/f=18.12/h=41/v=+3.902#a=gprs.swisscom.ch/b=gprs/c=gprs/d=0.000.000.000.000/e=ARC-1/f=gsm_103@gsmdata.ch/g=XXXXXX/h=datamanager_103@gsmdata.ch/i=XXXXXX/j=pop.mail-ch.ch/k=995/l=smtp.mail-ch.ch/m=465/n=gsm_103@gsmdata.ch#/a=datamanager_103@gsmdata.ch/b=datamanager_103@gsmdata.ch/c=datamanager_103@gsmdata.ch/g=Keller/j=/k=m+=41791234567/n+=41791234567/o+=41791234567/q+=41794999000/r=Keller Entwicklung/s+=41774293910/t=ARC 3G neu/u=MEASURE message/v=ALARM message/w=CHECK message/0=8.7475439/1=47.4984244/2=450.000/3=8.746532/4=47.500267/5=0.0000000#c/a=581097900/b=581094300/c=581162400/d=581155200/e=553182000/g=300/h=300/i=86400/l=86400/m=211/n=0/o=1/p=3/q=12/r=1/s=1/t=2/v=6/w=4/x=8/y=13/z=40/d=0/l=3/2=0/3=4-3/5=12/6=5/7=0/8=2/9=0/A=0/B=1#f/a=553182000/g=86400/h=86400/m=1/n=1/o=20/p=12/z=15/3=0#d=a+2.000000/b+=1.500000/c+=0.500000/f=+1.000000/g=+0.000000/i=+0.000000/j=+0.000000/k=+0.000000/m=+1.000000/n=+50.000000/o=+400.000000/p=+0.000000/q=+998.20001/r=+1.000000/s=+0.000000/t=+0.000000/u=+0.000000/v=+0.000000/w=+0.000000/0=+8.7475442/1=e+=47.498424/2=+450.00000#k=a=ftp.gsmdata.ch/b=datamanager_103@gsmdata.ch/c= XXXXXX/d=ARC/e=21/f=21/g=0/h=ARC_Database#O/g=0 #E/e
```

1.1.2 Limitation

Because of the command structure of the ARC-1, *certain characters are forbidden to use* when parameterize the ARC-1 (for example with GSM Setup).

Please remind that the ARC-1 only support the ASCII character set, from ASCII value "space" (32, 0x20) to "~~" (126, 0x7E)

1.1.2.1 Not supported characters by GSM Setup:

ASCII	"	#	'	()	,	/	:	;	<	=	>	[\]
Wert	34	35	39	40	41	44	47	58	59	60	61	62	91	92	93
	0x22	0x23	0x27	0x28	0x29	0x2C	0x2F	0x3A	0x3B	0x3C	0x3D	0x3E	0x5B	0x5C	0x5D

1.1.2.2 not supported characters for SMS:

ASCII	"	#	'	()	,	/	:	;	<	=	>	[\]
Wert	34	35	39	40	41	44	47	58	59	60	61	62	91	92	93
	0x22	0x23	0x27	0x28	0x29	0x2C	0x2F	0x3A	0x3B	0x3C	0x3D	0x3E	0x5B	0x5C	0x5D

ASCII	^	{	}	~
Wert	94	123	125	126
	0x5E	0x7B	0x7D	0x7E

1.1.2.3 Character set for a configuration change over E-mail/FTP

<command> and <variable name> are only processed in the range 0...9, a...z, A...Z. Anything else get discarded.

<variable values> are scanned and only ASCII characters in the range "space" to "z" (32 ... 122) get processed. Remaining characters get ignored!

1.2 Command table for E-Mail / FTP

All commandos with lowercase letters can be changed or adjusted via remote access. The commands with capital letters cannot be changed (except the command #O/g -> Acknowledge for the ARC-1) and are only for sent information.

1.2.1 General Content

1.2.1.1 #B Base64

Variable name	Description	Example / Range	Firmware Version
/a	Base64: binary data in an ASCII string format (Record data transfer enabled)	/a=[Base64 encoded content] See on page	17.26

1.2.1.2 #C Additional information about content

Variable name	Description	Example / Range	Firmware Version
/a	Start record page	/a=82 Range: 0 ... 8191	17.26
/b	Number of record pages	/b=8 Range: 0 ... 30	17.26
/m	Start of requested "ERROR" page	/m=2500 Range: 0 / 2000... 3999	17.26
/n	Number of requested "ERROR" pages	/n=30 Range: 0 ... 300	17.26
/o	Start of the "ERROR" memory	/o=2000 (fixed value)	17.26
/p	End of the "ERROR" memory	/p=3999 (fixed value)	17.26

1.2.1.3 #E End sign

Variable name	Description	Example	Firmware Version
/e	End sign of E-Mail or FTP file	#E/e	17.26

1.2.1.4 #F Message type / file

Variable name	Description	Example	Firmware Version
/a	Measurement	#F/a=0	17.26
/b	Configuration without acknowledge (Info only)	#F/b=0	17.26
/c	Alarm	#F/c=0	17.26
/d	Configuration with acknowledge (Response to configuration changes and to manually send)	#F/d=0	17.26
/e	Record data (measurements)	#F/e=0	17.26
/f	Requested record data via remote access	#F/f=0	17.26
/g	"ERROR" Report	#F/g=0	17.26

1.2.1.5 #G Text

Variable name	Description	Example	Firmware Version
/a	Text to measurement values	#G/a=MEASURE ARC SN10	17.26
/b	Text to alarm values	#G/a=ALARM ARC SN10	17.26
/c	Text to check values	#G/a=CHECK ARC SN10	17.26

1.2.1.6 #I Information

Variable name	Description	Example	Firmware Version
/n	Serial number	/n=5 (max. 8 ASCII)	17.26
/s	Signal quality	/s=24 [0 ... 31] -> [-113dBm...-51dBm] 2 dBm per step	17.26
/b	Battery capacity in [%]	/b=96 Range: 0...99 / Default: 99	17.26
/e	Device ID and CLASS	/e=9.20 (ARC-1)	17.26
/f	Software version	/f=18.12 [YY.KK]	17.26
/h	Rel. humidity in [%]	/h=41	17.26
/v	Battery voltage in [V]	/v=3.902	17.26

1.2.1.7 #M Measurement

Variable name	Description	Example	Firmware Version
/a	Current values (only selected channels / Configuration and Record files)	/a=-0.9611795+0.0002412+26.69 8974+0.9614199+28.260000+0.0 005353+0.0003824	17.26
/b	Saved values (only selected channels and only if "Record data transfer" is disabled)	/b=-0.9611795+0.0002412+26.69 8974+0.9614199+28.260000+0.0 005353+0.0003824	17.26
/c	Digital inputs "0" or "1" All	/c=+1+1	17.26
/d	Current values (all available channels / Configuration file only)	/d=-0.9611795+0.0002412+OFL+ OFL+26.698974+OFL+0.9614199+ 28.260000+0.0005353+0.000382 4	17.26

1.2.1.8 #O Acknowledge (16 Bit)

Variable name	Description	Example	Firmware Version
/f	To ARC-1 (send acknowledge to the ARC-1) <u>Note: The number is used as confirmation for sent configuration change</u>	/f=12345	17.26
/g	From ARC-1 (response the acknowledge number (12345) from the configuration change via remote access) If /g= 0 then this is a "Info" message or a manually send configuration	/g=0	17.26

1.2.1.9 #R "Error" Report

Variable name	Description	Example	Firmware Version
/a	„ERROR“ Report	/a=\$631317600,116,1, +CME ERROR: 10 Means: /a=\$Time in seconds, AT command, failure number, Error text	17.26

1.2.1.10 #T Time information

Variable name	Description	Example	Firmware Version
/s	Main time in seconds after the year 1.1.2000 0:0:0 <i>Range: [0 ... 2³²]</i>	/s=581094554 -> 31.05.2018 15:09:14	17.26
/p	Provider time If network operator does not support system clock update message, the initial date, time and time zone, displayed could be invalid ASCII format: yy.MM.dd,hh:mm:ss±zz yy: 2-digit year [2000-2069] MM: 2-digit month [01-12] dd: 2-digit day of month [00-31] hh: 2-digit hour [00-23] mm: 2-digit minute [00-59] ss: 2-digit seconds [00-59] zz: (optional) time zone offset from GMT, in quarter-hours [-47...+48]. If this value is not specified, the time zone offset will be 0. when function is not supported, ARC-1 returns date: /p=00.01.01,00:00:00+00	/p=18.05.31,17:08:58+08	17.26
/m	Measure time Time last measured values was stored (only when "Record data transfer" is disabled)	/m=581094554 -> 31.05.2018 15:09:14	17.26

1.2.1.11 #X CRC16

Variable name	Description	Example	Firmware Version
/a	CRC16 as decimal number (always 5-digits) (will be appended at the end of message in unencrypted state for each measurement file)	/a=05473 See page	17.26

1.2.2 Configuration

1.2.2.1 #a GPRS Settings

Variable name	Description	Example / Range	Length / Type	Firmware Version
/a	Access Point Name (APN / Provider)	/a=gprs.swisscom.ch	50 char	17.26
/b	Cellular Username (Provider)	/b=gprs	50 char	17.26
/c	Cellular Pasword(Provider)	/c=gprs	50 char	17.26
/d	DNS Server (optional)	/d=xxx.xxx.xxx.xxx	50 char	17.26
/e	E-Mail Alias (E-Mail forwarder)	/e=ARC-1	50 char	17.26
/f	E-Mail POP3 Login ID	/f=gsm_103@gsmdata.ch	50 char	17.26
/g	E-Mail POP3 Password	/g=XXXXXX	50 char	17.26
/h	E-Mail SMTP Login ID (optional)	/h=datamanager_103@gsmdata.ch	50 char	17.26
/i	E-Mail SMTP Password (optional)	/i=XXXXXX	50 char	17.26
/j	E-Mail POP3 Server Address	/j=pop.mail-ch.ch (with SSL)	50 char	17.26
/k	E-Mail POP3 Port	/k=995 (with SSL)	50 char	17.26
/l	E-Mail SMTP Server Address	/l=smtp.mail-ch.ch (with SSL)	50 char	17.26
/m	E-Mail SMTP Port	/m=465 (with SSL)	50 char	17.26
/n	E-Mail Return Address	/n=gsm_103@gsmdata.ch	50 char	17.26

1.2.2.2 #b Text, Number and Addresses

Variable name	Description	Example / Range	Length / Type	Firmware Version
/a	E-Mail Address Measure	/a=datamanager_103@gsmdata.ch	50 char	17.26
/b	E-Mail Address Alarm	/a=datamanager_103@gsmdata.ch	50 char	17.26
/c	E-Mail Address Info	/a=datamanager_103@gsmdata.ch	50 char	17.26
/g	SMS Confirmation password	/g=Keller	10 char	17.26
/j	SIM Pin	/j=	10 char	17.26
/k	Data connection call number used to connect with a modem (Logger)	/k=	30 char	17.26
/m	Measure SMS number	/m=+41791234567	30 char	17.26
/n	Alarm SMS number	/n=+41791234567	30 char	17.26
/o	Info SMS number	/o=+41791234567	30 char	17.26
/q	SMS Service Center number <u>Note: not changeable via remote access</u>	/q=+41794999000	30 char	17.26
/r	Network name (Position)	/r=Keller Entwicklung	20 char	17.26
/s	SIM Card number (unique identifier for the data manager)	/s=+41774293910	30 char	17.26
/t	Location name (Position)	/r=ARC 3G neu	20 char	17.26
/u	Measurement (customised text message for measurements)	/u=MEASURE message	160 char	17.26

/v	Alarm (customised text message for alarm)	/v=ALARM message	160 char	17.26
/w	Answer (customised text message for configuration response)	/w=CHECK message	160 char	17.26
/0	Longitude text	/0=8.7475439	20 char	17.26
/1	Latitude text	/1=47.4984244	20 char	17.26
/2	Altitude text	/2=450.000	20 char	17.26
/3	CellLocate Longitude <u>Note: not directly changeable via remote access (Execute #e/l)</u>	/3=8.746532	20 char	17.26
/4	CellLocate Latitude <u>Note: not directly changeable via remote access (Execute #e/l)</u>	/4=47.500267	20 char	17.26
/5	CellLocate Altitude <u>Note: not directly changeable via remote access (Execute #e/l)</u>	/5=0	20 char	17.26

1.2.2.3 #k FTP Settings

Variable name	Description	Example	Length / Type	Firmware Version
/a	FTP Server Name (FTP Host URL or IP)	/a=ftp.gsmdatas.ch	50 char	17.26
/b	FTP Login ID	/b=datamanager_103@gsmdata.ch	50 char	17.26
/c	FTP Password	/c=XXXXXX	50 char	17.26
/d	FTP Account	/d=ARC-1	50 char	17.26
/e	FTP source control port	/e=21 (fix / not used)	5 char	17.26
/f	FTP destination control port	/f=21	5 char	17.26
/g	FTP source data port	/g=0 (fix / not used)	5 char	17.26
/h	FTP File Path	/h=ARC_Database	50 char	17.26

1.2.2.4 #c measurement settings

Variable name	Description	Example	Length / Type	Firmware Version
/a	Timer "Measure" (next measuring date) Range: Main Time + 0 ... 5184000 sec (60 days) <u>Note: Values outside the range will be automatically fitted to the next nearest value</u>	#c/a=581097900 -> 31.05.2018 16:05:00	unsigned 32 / ASCII	17.26 (F100/1)
/b	Timer "Alarm" Range: Main Time + 0 ... 5184000 sec (60 days) <u>Note: Values outside the range will be automatically fitted to the next nearest value</u>	/b=581094300 -> 31.05.2018 15:05:00	unsigned 32 / ASCII	17.26 (F100/2)
/c	Timer "Info" Range: Main Time + 0 ... 5184000 sec (60 days) <u>Note: Values outside the range will be automatically fitted to the next nearest value</u>	/c=581162400 -> 01.06.2018 10:00:00	unsigned 32 / ASCII	17.26 (F100/3)
/d	Timer "Check" Range: Main Time + 0 ... 5184000 sec (60 days) <u>Note: Values outside the range will be automatically fitted to the next nearest value</u>	/d=581155200 -> 01.06.2018 08:00:00	unsigned 32 / ASCII	17.26 (F100/4)
/e	Timer "Data Connection" Range: Main Time + 0 ... 5184000 sec (60 days)	/e=553182000 -> 12.07.2017 13:40:00	unsigned 32 /	17.26 (F100/5)

<u>Note: Values outside the range will be automatically fitted to the next nearest value</u>		ASCII		
/g	Interval "Measure" Range: 1 ... 2592000 sec (30 days) <u>Note: Values outside the range will be automatically fitted to the next nearest value</u>	/g=300 -> 5 min	unsigned 32 / ASCII	17.26 (F100/6)
/h	Interval "Alarm" Range: 1 ... 2592000 sec (30 days) <u>Note: Values outside the range will be automatically fitted to the next nearest value</u>	/h=300 -> 5 min	unsigned 32 / ASCII	17.26 (F100/7)
/i	Interval "Info" Range: 1 ... 2592000 sec (30 days) <u>Note: Values outside the range will be automatically fitted to the next nearest value</u>	/i=86400 -> 1 day	unsigned 32 / ASCII	17.26 (F100/8)
/j	Interval "Check" Range: 1 ... 2592000 sec (30 days) <u>Note: Values outside the range will be automatically fitted to the next nearest value</u>	/j=86400 -> 1 day	unsigned 32 / ASCII	17.26 (F100/9)
/k	Interval "Data Connection" Range: 1 ... 2592000 sec (30 days) <u>Note: Values outside the range will be automatically fitted to the next nearest value</u>	/k=86400 -> 1 day	unsigned 32 / ASCII)	17.26 (F100/10)
/m	Measure / Save channels 0 ... 7	/m=211 -> 1101`0011 (Channel: 0,1,4,6,7) _0)	1 Byte / ASCII	17.26 (F100/11)
/n	Reserved / no function	/n=0	1 Byte / ASCII	17.26 (F100/11) _1)
/o	Collect measurements (SMS only) Send an SMS after x measurement	/o=1	1 Byte / ASCII	17.26 (F100/11) _2)
/p	Measure / Save channels 8 ... 15	/p=3 -> 0000`0011 (Channel: 8, 9) _3)	1 Byte / ASCII	17.26 (F100/11)
/q	Collect measurements (E-Mail only) Send an E-Mail after x measurement	/q=1	1 Byte / ASCII	17.26 (F100/11) _4)
/r	Alarm Channel	/r=1	1 Byte / ASCII	17.26 (F100/12) _0)
/s	Alarm Type 1-> On / Off 2-> Delta 3-> Digital Input	/s=1	1 Byte / ASCII	17.26 (F100/12) _1)
/t	Alarm Retry (Send the Alarm x times if the condition is still true)	/t=2	1 Byte / ASCII	17.26 (F100/12) _2)
/v	Resolution Pressure (SMS only)	/v=6 -> (+)0.9559	1 Byte / ASCII	17.26 (F100/14))
/w	Resolution Temperature (SMS only)	/w=4 -> (+)24.4	1 Byte / ASCII	17.26 (F100/15)

)
/x	Lock Timer (Check only) Only "Check" Bit can be changed	/x=8	1 Byte / ASCII	17.26 (F100/16 _0)
/y	Lock Timers "Check" Bit cannot be changed (only with variable name "x") Bit. Pos. 0-> Measure Bit. Pos. 1-> Alarm Bit. Pos. 2-> Info Bit. Pos. 3-> Check Bit. Pos. 4-> Dial	/y=13 -> Measure, Info, Check is active	1 Byte / ASCII	17.26 (F100/16 _0)
/z	Send Type SMS / E-Mail To ensure that a "Check" Function is always active, when "Check" E-Mail is switched off Check FTP is automatically activated Bit. Pos. 0-> Measure SMS Bit. Pos. 1-> Alarm SMS Bit. Pos. 2-> Info SMS Bit. Pos. 3-> Check SMS Bit. Pos. 4-> Measure E-Mail Bit. Pos. 5-> Alarm E-Mail Bit. Pos. 6-> Info E-Mail Bit. Pos. 7-> Check E-Mail	/z=40 -> Check SMS, Alarm E-Mail is active	1 Byte / ASCII	17.26 (F100/16 _1)
/0	Modem Protocol (V.32, V.34, V.110) 0-> 9600bps (V.32) 1-> 9600bps (V.34) 2-> 9600bps (V.110)	/0=0 -> 9600bps (V.32)	1 Byte / ASCII	17.26 (F100/16 _2)
<u>Note: Not working with 3G/4G</u>

/n	Water Level Configuration Length (B)	/n=+50.000000	17.26 (F30/11)

/o	Water Level Configuration Height (A)	/o=+400.00000	17.26 (F30/12)
/p	Water Level Configuration Offset (f)	/p=+0.0000000	17.26 (F30/13)
/q	Water Level Configuration Density	/q=+998.20000	17.26 (F30/14)
/r	Water Level Configuration Width (b)	/r=+1.0000000	17.26 (F30/15)
/s	Water Level Configuration Angle (F)	/s=+0.00000000	17.26 (F30/16)
/t	Water Level Configuration Form factor (m)	/t=+0.00000000	17.26 (F30/17)
/u	Water Level Configuration Minimum calculation Height (h)	/u=+0.00000000	17.26 (F30/18)
/v	Water Level Configuration Reserve	/v=+0.00000000	17.26 (F30/19)
/w	Water Level Configuration Reserve	/w=+0.00000000	17.26 (F30/20)
<hr/>			
/0	GPS coordinate as float (Longitude)	/0=+8.7475442	17.26 (F30/24)
/1	GPS coordinate as float (Latitude)	/1=+47.498424	17.26 (F30/25)
/2	GPS coordinate as float (Altitude)	/2=+450.00000	17.26 (F30/26)

1.2.3 Execute specific functions of the ARC-1 via remote access

1.2.3.1 #e correct time / set commands

Variable name	Description	Example	Firmware Version
/a	Request record data Start time	/a=580824000 -> 28.05.2018,12:00:00+08	17.26
/b	Request record data Stop time	/b=581083200 -> 31.05.2018,12:00:00+08	17.26
/l	Telit Cell Locate function This is a triangulation of the antenna around the ARC-1 which returns the GPS coordinates <u>Limitation: max. 1 query per hour</u>	/l=1 -> the ARC-1 will execute a Cell Location	17.26
/m	“Error” Report start page m=0 -> gives the newest error back (30 pages)	/m=0 Range: 2000 ... 3999	17.26
/n	“Error” Report number of pages Return the number of pages	/n=1 Range: 1 ... 300	17.26
/t	Correct the “Main” Time of the corresponding correction factor max. ±172800 sec. ±2 days	/t=+600 -> add 10 min to the “Main” time	17.26

2 RECORD EEPROM (MEMORY-MAP)

The total memory is divided into "pages", therefore each "page" consist of 64 bytes. The number of "pages" may vary depending on the device type. The ARC-1 has currently a memory of 4Mbit with 8192 "pages", therefore the last 8 "pages" are reserved for the free use of the customer.

The first 8 byte are used as header. All following bytes are actual data. A data set consists of four byte. These include the measured variable / channel and the corresponding measured value.

RECORD-Memory (4 Mbit)

Page	Bemerkung

Comment:

A new record always starts on a new page. An empty data packet (0xFF) shows the end of a record.

2.1 Header

The Header of each „page“ (Record) always consist of 8 Bytes which is composed as follows:

Byte 0: **Status Byte / Record Startpage**

Bit	7	6	5	4	3	2	1	0
Byte 0	Start detection	Overflow counter	Start pointer (High)					

Start detection: If this bit is set '1' this means that this page is the beginning of a record

Overflow counter: is incremented when the last page has been reached and it begins again at the first page

Start pointer: displays the page, where the record was started. Superior 5 bits of the Record start page (Start pointer).

Byte 1: Low order Byte of the **record start page** (lower Byte). Together with Byte 0 (Bit 0 ... Bit 4), this forms the complete **record start page** ($8\text{Bit} + 5\text{Bit} = 13\text{Bit} \rightarrow 2^{13} = 8192$. This means that 8192 „pages“ can be addressed.

Byte 2...5: **Absolute time** in seconds[s] ($0 \dots 2^{32} - 1 = 49710 \text{ T} = 136 \text{ J}$) from the 01.01.2000, 00:00:00

Byte 6 + 7: **Reserved** for future use

2.2 Data packet

A data packet consists of 4 bytes. There are two types of data packets:

Measurement data

Byte	Description
0	channel (0 ... 14) ,0000' ... ,1110'
1	Measuring value Byte 3
2	Measuring value Byte 2
3	Measuring value Byte 1

The measuring value is a 4 byte float, where the last byte is omitted

The measurement data contains in addition to the channel (Byte 0) also the elapsed time (0 ... 15 seconds) to the previous measurements.

If the elapsed time between the measurements is greater than 15 seconds, a timestamp will be generated.

Time stamp (Delay)

Byte	Description
0	Signe for time stamp (0xF0)
1	Time delay to the previous data packet (3. Byte)
2	Time delay to the previous data packet (2. Byte)
3	Time delay to the previous data packet (1. Byte)

A data packet with time delay will be generated, when time delay to previous data packet is higher than 15 seconds

Time delay ($2^{24}-1 = 0 \dots 16777215 \text{ s} = 0 \dots 194 \text{ T}$

3 OVERVIEW MESSAGE TYPE

The ARC-1 can send different messages:

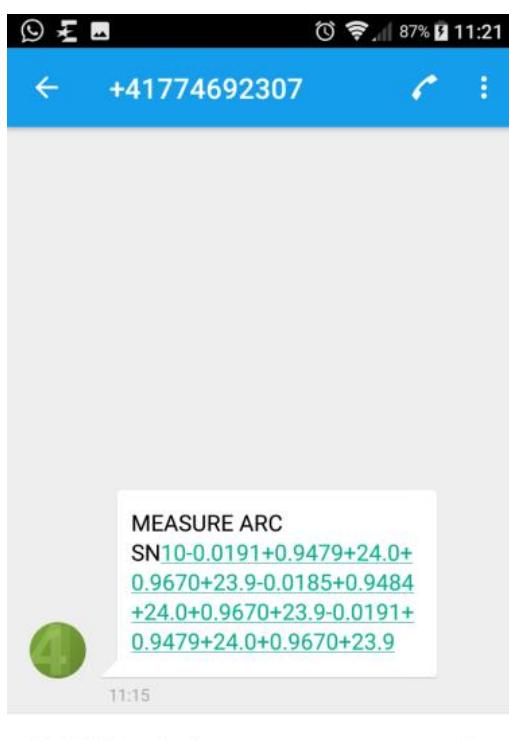

- **“Measure” message**
The ARC-1 measures in a defined interval the selected channels and transfers them together in one message.
- **“Info” message**
All useful information about the ARC-1 is transferred in a defined interval.
- **“Alarm” message**
An alarm message will be sent immediately if the alarm condition is true.
- **“Check” message (answer to a command)**
The ARC-1 will respond to a command via remote access if a message is sent to it.

4 SMS

The messages from and to the ARC-1 are in TEXT – Mode (PDU-Mode is not supported). A message contains maximum 160 letters (limitation of the SMS function).

4.1 Description of the data format

Identifier “+41774692307”

The sender is identified by its telephone number. The phone number will be displayed on the top of the SMS.

Time information “11:15”

The time information, when the short message is received is included in each short message.

Text “MEASURE ARC SN10”

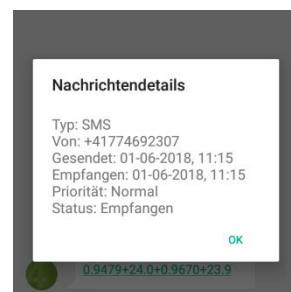

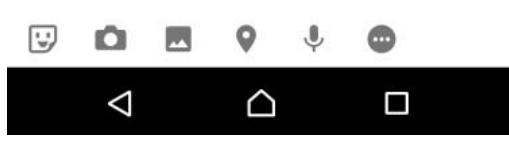

At the beginning of the message you can set an individual text to identify the device.

Data

The measurements follow direct after the “text” and each value is separated by a + or – sign.

All values are in that order how they are listed in the “Measuring channels / Save channels” setting.

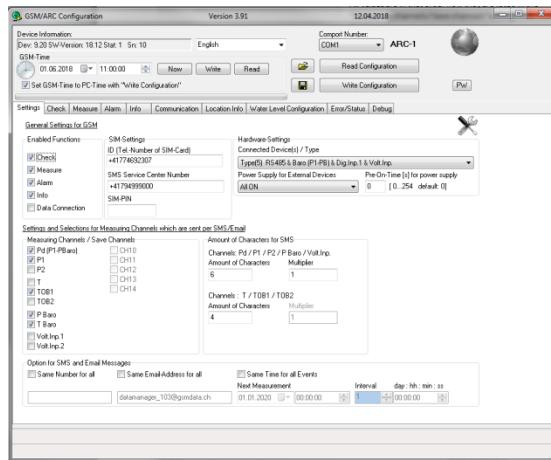

Note: Additional information about the sender and the time stamp can be seen in the SMS details on the phone

4.2 General Settings

These are the general settings for all following SMS Message types.

Measuring / Save channels

Settings: P_d , P_1 , T_{OB1} , P_{Baro} , T_{Baro}

(The selected channels will be collected and transferred by SMS)

Amount of character for SMS:

Pd / P1 / P2 / P_{Baro} / Volt. Inp.:

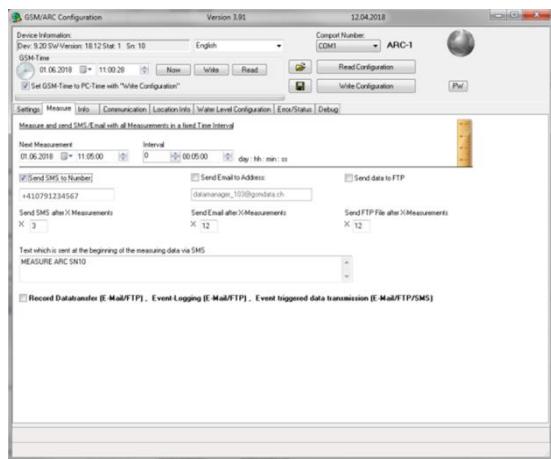

Settings: 6

T / TOB1 / TOB2:

Settings: 4

(These values will be transferred with this amount of characters)

4.2.1 "Measure"

Measure interval

Settings: 5 min

(All selected channels are measured in this interval)

Amount of measurements (sent in 1 SMS):

Settings: 3

(The SMS message with all collected values is sent after X measurements)

Text at the beginning of the message:

Settings: MEASURE ARC SN10

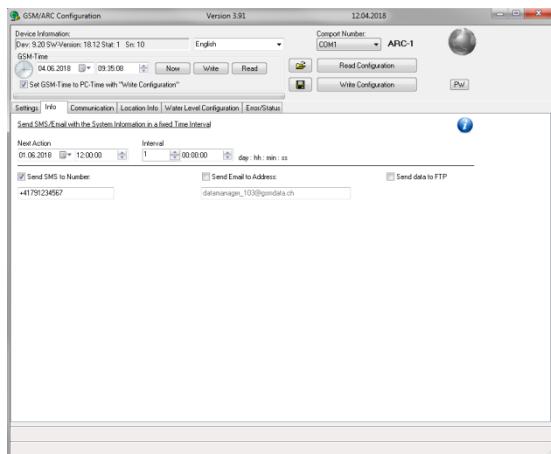

(Individual text at the beginning of the message could be used to identify the device)

Since the start time of the measurement was set to "11:05:00, 01.06.2018" with an interval of "5 min" and after "3" collected measurement sets the message looks like follow:

4.2.2 “Info”

Info interval

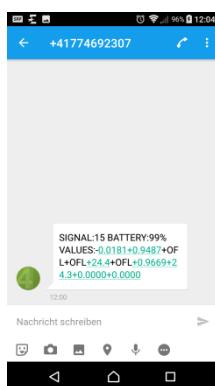

Settings: Every day from the 01.06.2018

Send to:

Settings: SMS only

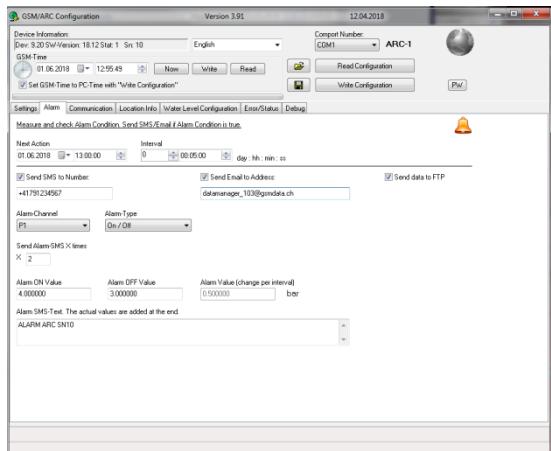

(Info message which is send to the defined number)

Since the start time of the info message was set to “12:00:00, 01.06.2018” with an interval of 1 day the message looks like follow:

Keyword	Value / Meaning
SIGNAL:	Shows the signal quality of the ARC-1. The value from 0 through 31 covers the range of -113 dbm (or less) to -51dbm (or greater)
BATTERY:	Indicates the calculated remaining battery capacity in percentage. Range 0...99
VALUES:	All available actual values (measured at “Timestamp”) are listed. Resolution is defined in the general settings.

4.2.3 “Alarm”

Alarm interval

Settings: 5 min

(The alarm condition will be checked every 5 min and if the condition gets true an alarm message will be send immediately)

Alarm channel / Alarm type:

Settings: P1, On/Off

(Defines the channel and the type of the alarm)

Send Alarm X times:

Settings: 2

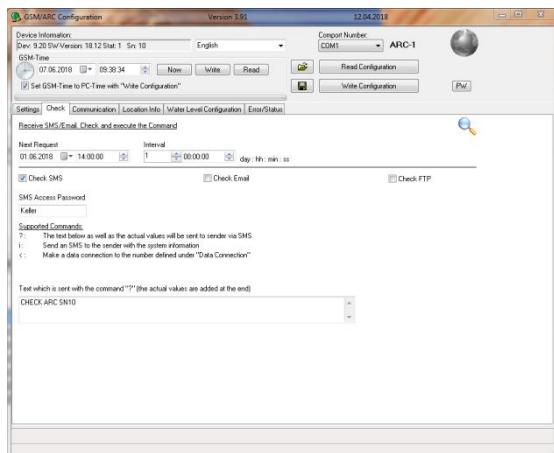

(The alarm messages are limited to two even the condition is still true. If the condition gets false again it will be reset)

Keyword	Value / Meaning
Inputs:	Status of the digital inputs (0 = open 1 = closed)

4.2.4 “Check”

**Check interval:**

Settings: Every day from the 01.06.2018

Check type:

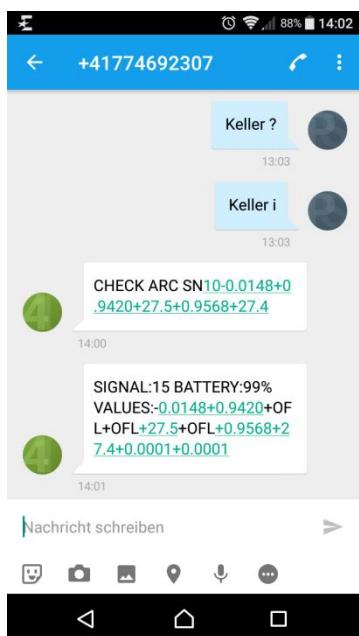

Settings: SMS only

Password

Settings: Keller

(The password is case sensitive)

To request the current measurement data “?” or the system information “i” an SMS must be send with the password and the command to the telephone number of the ARC-1.

5 FTP / E-MAIL

The advantage of the FTP and the E-Mail functionality is the possibility of much larger message files as with SMS. A Configuration file includes all information/settings of the ARC-1. With the "Check" functionality the user has the possibility to change all settings which are described in the "Command table for E-Mail / FTP".

5.1 Description of the data format / storage

5.1.1 FTP (recommended)

The screenshot shows an FTP client interface. At the top, the server path is set to "/ARC_Database/+41774692307 M". Below this, a tree view shows the directory structure: a root folder containing "ARC_Database", which itself contains "+41774692307 M" and "+41774692307 S". Under "+41774692307 M", there are two files: "+41774692307_8023 M.txt" and "+41774692307_8024 M.txt". Both files have a size of 1'296 bytes, are of type "Textdokument", and were last modified on 26.07.2018 at 11:32:00.

Storage “/ARC_Database/+41774692307 M”:

The FTP File will be saved on the FTP Server which has to enter in the register "Communication". The file will be stored on the FTP Server in the **root/FTP directory/ID(telephone number) " M"(Space M)**

Note: If the folder does not exist the ARC-1 tries to put the file in next upper directory until the root directory is reached.

Note. All files from the ARC-1 will be put in the "M" folder and all files for the ARC-1 (remote configuration) has to be put in the "S" folder respectively are automatically stored there by the data manager.

Note: The ARC-1 is not able to create folders on the FTP Server. Either you have to create the directories manually or the data manager generates them.

Identifier/ File name “+41774692307_8023 M.txt”:

The filename consist of the ID followed by an underline (_) a continuous index (0...65535) and the origin (" M" (from the ARC-1)). The data will be stored as a text file.

Time information “26.07.2018 11:32:00”:

The date and time on the FTP server indicates the creation time of the file. In the file itself there are additional time information of the measurement and the sending time.

5.1.2 E-Mail

The screenshot shows the Microsoft Outlook Web App interface. The left sidebar lists various folders: "Posteingang (1)", "Ungeselene E-Mail (1)", "Gesendete Elemente", "datamanager_103", and "Posteingang (1)". The main pane shows the "Posteingang" folder with one item selected: "+41774692307 M" (ARC_SN10). The status bar at the bottom right shows the time as 17:02.

Storage “Inbox”:

The E-Mail will be saved in the inbox of the E-Mail Server which has to enter in the register "Communication".

Identifier “+41774692307 M”:

The subject contains the ID followed by the origin " M"

Note. All files from the ARC-1 will have the pattern " M" and all files for the ARC-1 (remote configuration) must have the pattern " S" as origin.

E-Mail Alias (E-Mail forwarder) “ARC_SN10”:

The E-Mail can be given a freely defined name, so that the E-Mail can be easily assigned.

Time information “26.07.2018 17:02:00”:

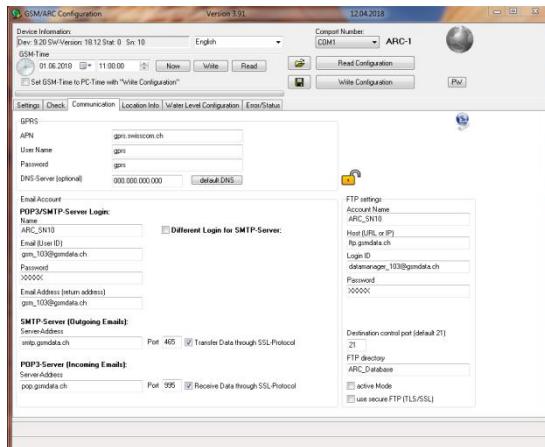

The date and time on the FTP server indicates the creation time of the file. In the file itself there are additional time information of the measurement and the sending time.

5.2 General Settings (used for these examples)

These are the general settings for all following used FTP/E-Mail Message types.

5.2.1 Communication

GPRS

This are the needed configurations to set up a connection to your carrier's cellular network of your Sim card provider

E-Mail account

It is not recommended to use a "GMX"/ "GMAIL" account due to the strong security regulation of this Email provider.

FTP account

It is the best way to use an FTP server instead an E-mail server, due to the easier implementation and functionality

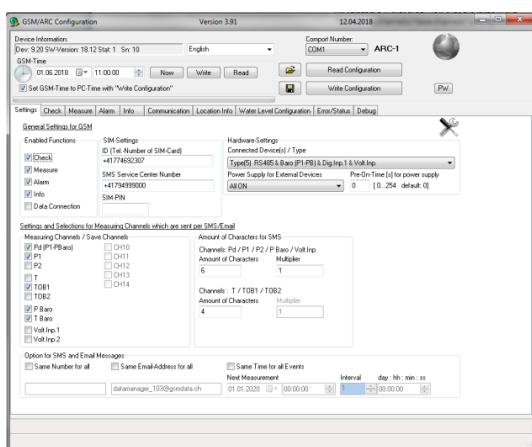

Security

Be sure that the Port number is corresponding to the needed FTP/ E-Mail provider settings.

Security	ARC-1
None	yes
SSL / TLS	TLS v1.1
STARTTLS	no

Note: We recommend using at least two E-Mail accounts in conjunction with the Datamanager. An E-Mail account (outbox / example: datamanager_103@gsmdata.ch) to which the ARC-1 send the measurements and configurations and another E-Mail account (Inbox / example: gsm_103@gsmdata.ch) for configurations sent from the Datamanager to the ARC-1. Thus, the ARC-1 downloads only configurations. This protects the battery and keeps the cost of data transmission low.

5.2.2 Channels

ID

This number has to be unique and should be the phone number of the SIM card.

Connected Device / Type

Settings: Type 5

Measuring / Save channels

Settings: Pd, P1, TOB1, P_Baro, T_Baro

(The selected channels will be collected and transferred by FTP/E-Mail)

Amount of character for SMS:

Not used for FTP and E-Mail

The Standard Resolution for FTP / E-Mail is: 9

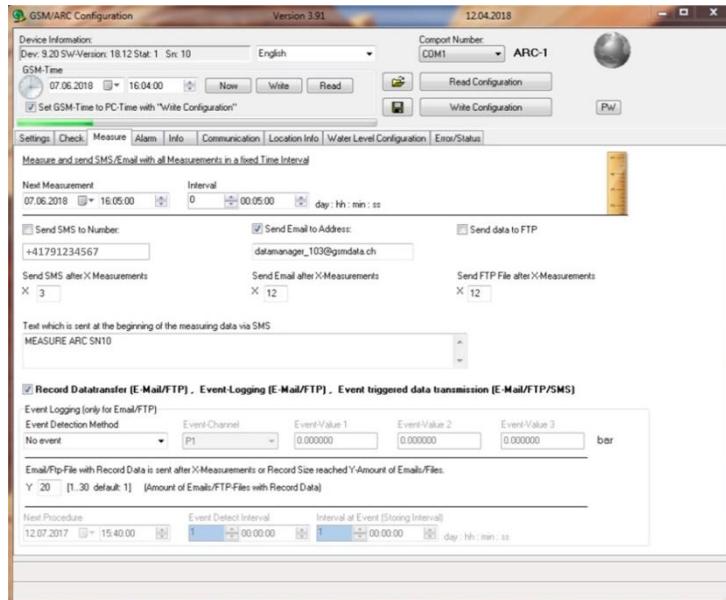

Example: 0.9622050 bar
26.100002 °C

(All values will be transferred with this amount of characters)

5.3 Measure “#F/a” / “#F/e”

5.3.1 With “Record function” in Base64 “#F/e” (recommended)

Measure interval

Settings: 5 min

(All selected channels are measured in this interval)

Amount of measurements:

Settings: 12

(The FTP/E-Mail message with all collected values is sent after X measurements)

Text at the beginning of the message:

Settings: MEASURE ARC SN10

(Individual text at the beginning of the message could be used to identify the device)

Record Data transfer:

Settings: Activated (measure values will be send in Base64 as Record structure)

Note: When “record function” is activated on ARC-1, the stored (EEPROM “Record”) measurement data get compromised to base64 code and transferred. The ARC-1 device type information (#c/6) is transmitted with the configuration file.

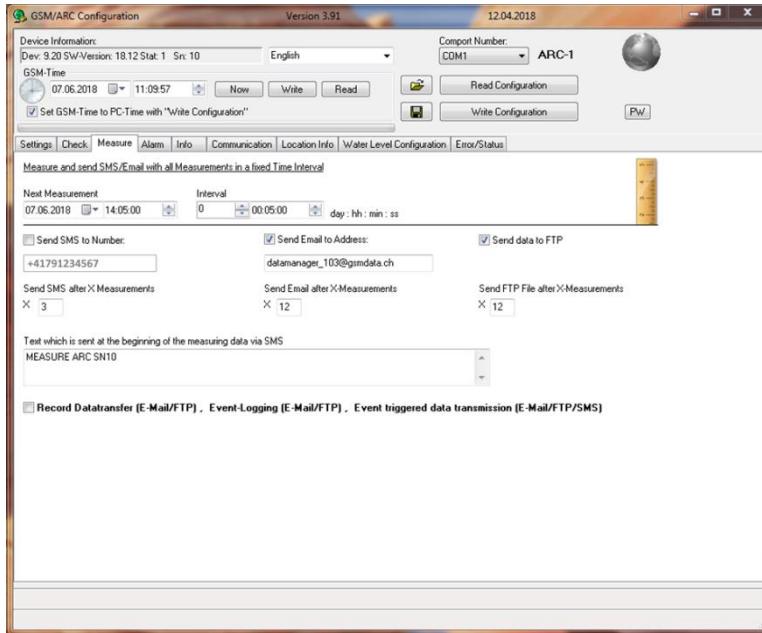

5.3.1.1 Example of the structure

#F/e=0#C/a=189/b=6#T/s=581756460/p=18.06.08,09:00:45+08#M/a=0.0184340+0.9424388+24.463745+0.9608600+24.270000/c=+1+1#/n=10/s=22/b=99/e=9.20/f=18.12/h=52/v=+3.862#B/a=gL0irNkOAAAavIkltED9xyEBBwfjgP3Y0cEG+ZvAAASwAvlVpEd9x2kBwXzGp3Y1cEG+UfAAASwAvlviEd9xrQc9lqzbZgAAQEHAwWA/dglwQb1c8AABLAC8j7gQP3GNQEHAIgA/dgpwQb498AABLAC8kPYQP3GBQEHAm0mA/dgkAvSKs3b4AAHBBwrvwAAEsALyTzBA/cWNAQcUYD92A3BqvPwAAEsALydnNRA/cRpAQcDSYD92AXBv1z///AL0irOFCAAAvZpED9xTEBwU1gP3X/cEHAKPAAASwAvKBMED9w+UBBwfjgP3YAcEHBhvAAASwAvJdpED9xTAC9lqzimgAAQEHCv2A/dgVwQckP8AABLAC8mhcQP3EqEHDegA/dgBwQcJm8AABLAC8lwMQP3FDQEHDtWA/dfoAvSk5fIAAHBBwij//////////////##E/e#X/a=55998

In addition to the encoded measurement data in Base64 (see 7 Decoding Base64/ page 33), a measurement message contains also the start page and the number of pages from the Record that have been transferred. Also the main time and the sending time (Provider) as well as the last measured values in plain text will be displayed. To each message, the device information (like serial number, signal quality, battery state, etc.) are appended.

5.3.2 In plain text "#F/a" (not recommended)

Measure interval

Settings: 5 min

(All selected channels are measured in this interval)

Amount of measurements:

Settings: 12

(The FTP/E-Mail message with all collected values is sent after X measurements)

Text at the beginning of the message:

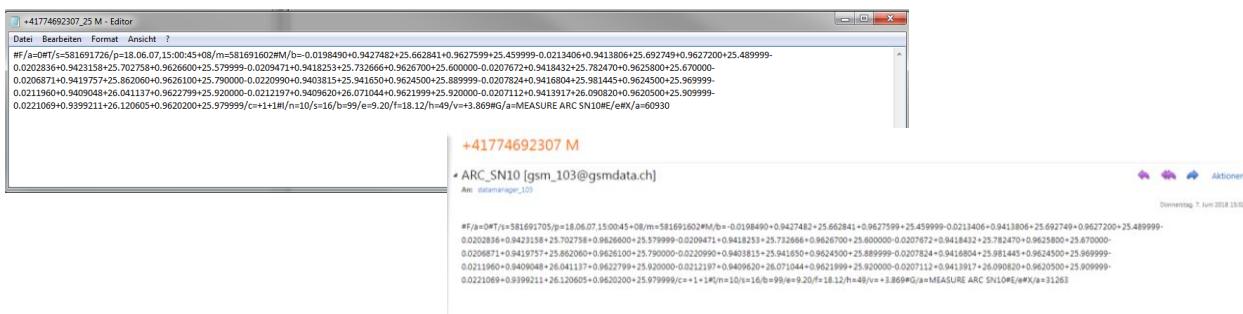

Settings: MEASURE ARC SN10

(Individual text at the beginning of the message could be used to identify the device)

Record Data transfer:

Settings: Not activated (measure values will be send in plain text)

Note: When working with plain text transmission, recognize first which device type is active (#c/6) and check afterwards the activated channels (#c/m and #c/p) to know the measurement values order. This information only gets transmitted with configuration files, but not with normal measurement files.

5.3.2.1 Example of the structure

```
#F/a=0#T/s=581691726/p=18.06.07,15:00:45+08/m=581691602#M/b=-0.0198490+0.9427482+25.662841+0.9627599+25.459999-0.0213406+0.9413806+25.692749+0.9627200+25.489999-0.0202836+0.9423158+25.702758+0.962660+25.579999-0.0209471+0.9418253+25.73266+0.9626700+25.600000-0.0207672+0.9418432+25.782470+0.9625800+25.670000-0.0206871+0.9419757+25.862060+0.9626100+25.790000-0.0220990+0.9403815+25.941650+0.9624500+25.889999-0.0207824+0.9416804+25.981445+0.9624500+25.969999-0.0211960+0.9409048+26.041137+0.9622799+25.920000-0.0212197+0.9409620+26.071044+0.9621999+25.920000-0.0207112+0.9413917+26.050820+0.9620500+25.909999-0.0221069+0.9399211+26.120605+0.9620200+25.979999/c=+1+1#/n=10/s=16/b=99/e=9.20/f=18.12/h=49/v=+3.869#G/a=MEASURE ARC SN10#E/e#X/a=60930
```

Unlike the transmission in the "Record format", the message contains only the times (main time, provider time and additional the (last) measurement time), the data in "plain text" format, the device information and a user defined text.

/m=581691602 -> 07.06.2018 13:00:02 (last measurement)

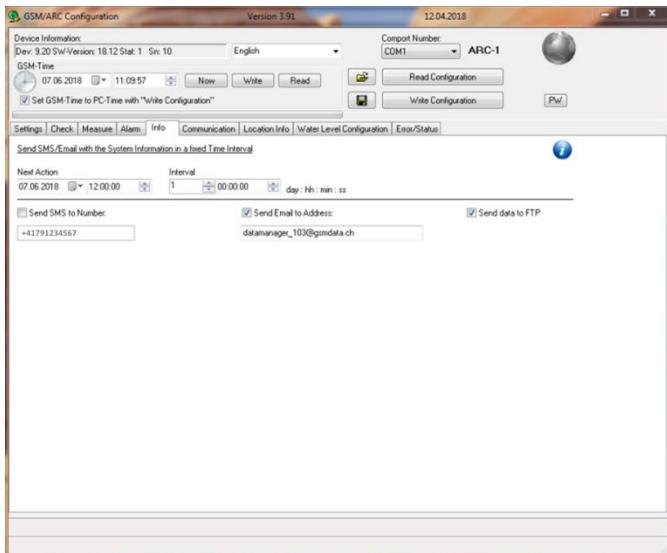

Since we now the last measurement time "07.06.2018 13:00:02", the interval of "5 min" and the collected measurements "12" we know the time of the first measurement:

-> 07.06.2018 12:00:02 (first measurement)

Attention: With this setting no measurement data will be stored in the EEPROM (Record).

5.4 Info “#F/b”

Info message

Settings: From the 07.06.2018 12:00:00 each day

Sent to:

Settings: FTP and E-Mail

+41774692307 M

The data contains all the different settings which are made with the Configuration tool.

5.5 Alarm "#F/c"

Alarm interval

Settings: 5 min

(The alarm condition will be checked every 5 min and if the condition gets true an alarm message will be send immediately)

Alarm channel / Alarm type:

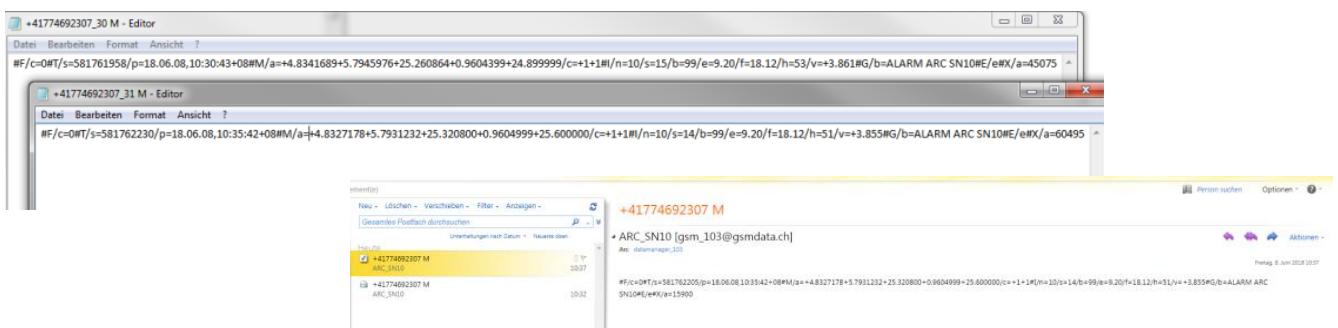

Settings: P1, On/Off

(Defines the channel and the type of the alarm)

Send Alarm X times:

Settings: 2

(The alarm messages are limited to two even the condition is still true. If the condition gets false again it will be reset)

5.5.1.1 Example of the structure

#F/c=0#T/s=581761958/p=18.06.08,10:30:43+08#M/a=+4.8341689+5.7945976+25.260864+0.9604399+24.899999/c=+1+1#/n=10/s=15/b=99/e=9.20/f=18.12/h=53/v=+3.861#G/b=ALARM ARC SN10#E/e#X/a=45075

The alarm message contains the time information (Main time, Provider time), the activated channels in "plain text" format, the device information, as well as a user defined text.

Attention: This measurement data will not be stored in the EEPROM (Record).

5.6 Check "#F/d" / "#F/f" / "#F/g"

5.6.1 Request missing Record data

Get the missing Record data from the 10.06.2018 22:00:01 till the 11.06.2018 04:00:01

5.6.1.1 Message to the ARC-1

The screenshot shows two windows. The top window is a terminal or command-line interface with the title '+41774338261_0 S - Editor'. It displays the command '#e/a=581983201/b=582004801#O/f=1061#E/e'. The bottom window is a web-based email client titled 'Outlook Web App' with the subject '+41774360103 S'. The email is from 'Datamanager 103 [datamanager_103@gsmdata.ch]' and has the message ID '#e/a=581940000/b=582004800#O/f=18994#E/e'. The email body contains the same command as the terminal window.

5.6.1.1.1 Example of the structure

#e/a=581983201/b=582004801#O/f=1061#E/e

5.6.1.2 Message from the ARC-1

First, all stored measurement data will be sent (#F/e). After that the ARC-1 is looking for a measurement entry before the 10.06.2018 22:00:01 and after the 11.06.2018 04:00:01. It will collect the data and send up to 30 messages (#F/f). Finally, the current configuration is sent (#F/d).

5.6.1.2.1 Example of the structure

5.6.2 Get “Error” Report

Get an “Error” report from the ARC-1

5.6.2.1 Message to the ARC-1

The screenshot shows an Outlook Web App interface. At the top, there's a toolbar with 'Datei', 'Bearbeiten', 'Format', 'Ansicht', and a question mark icon. Below it, a text input field contains the command '#e/m=0/n=1#O/f=23636#E/e'. The main area is titled 'Outlook Web App' and shows a list of emails under 'Posteingang'. One email is selected, highlighted in yellow, with the subject '+41774360103 S' and the recipient 'Datamanager 103 [datamanager_103@gsmdata.ch]'. The message body contains the command '#e/m=0/n=1#O/f=46626#E/e'. The interface includes a sidebar with 'Favoriten' and a navigation bar with 'Abmelden', 'Personen suchen', and 'Optionen'.

5.6.2.1.1 Example of the structure

#e/m=0/n=1#O/f=46626#E/e

5.6.2.2 Message from the ARC-1

First, all stored measurement data will be sent (#F/e). After that the ARC-1 is looking for the “ERROR” report. It will collect the data and send up to 30 messages (#F/g). Finally, the current configuration is sent (#F/d).

5.6.2.2.1 Example of the structure

qBAEUSwQB+XwEAbfh9AF5U=#E/e#X/a=780

7.2 Converted BASE64 (green) to Decimal (red) code:

Put that string into a BASE64 to Decimal converter, as one on the web page: <https://conv.darkbyte.ru/>

Please note: be aware that no spaces, carriage return or line feed are copied into the window

7.3 Interpretation:

Header (consists of 7 Bytes)

3 230 26 103 197 248 0 0

start pointer record : Byte0 = 3 = 00000011, Byte1 = 230 = 11100110, start pointer = 0001111100110

$$\begin{aligned} \text{start pointer absolute time [s] from 01.01.2000} &= 2^{24} * \text{Byte1} + 2^{16} * \text{Byte2} + 2^8 * \text{Byte3} + \text{Byte4} \\ &= (26 * 16777216) + (103 * 65536) + (197 * 256) + 248 = 443008504 \text{ seconds from 01.01.2000} \\ &= 10:56:05 / 14.01.2014 \end{aligned}$$

First data package (consists of 4 Bytes)

192 64 25 141

Byte0 = 192 = 11000000

= selected channel = 1100 = 12

Converting Bytes to IEEE754 (Byte0 = 255 (default))

Measuring value of channel 12 = 2.399291

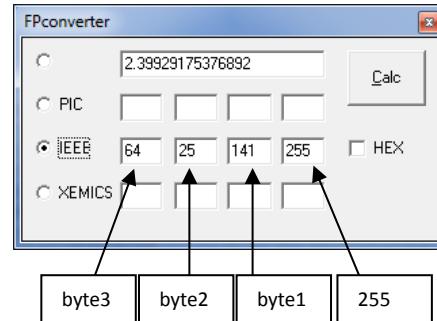

Second data package (consists of 4 Bytes)

240 0 1 34

Byte0 = 240 = 11110000

When Byte0 = 240 = 11110000 then data package

Information is about data packet time delay

Data package time delay (to last data package) = $= 2^{16} * \text{Byte3}(0) + 2^8 * \text{Byte2}(1) + \text{Byte3} (34) = 290 \text{ seconds (4min 50s)}$

End of record or empty data package

255 0 15 7

Byte0 = 255 = 11111111 = represents empty package or end of record.

Byte1 + Byte2 + Byte3 getting ignored. A new record starts always on a new page.

8 CRC16

Example:

#F/e=0#C/b=3538/b=17#T/s=580816908/p=18.05.28,12:01:11+0#M/a=+0.0000000+0.0000000+0.0000000+0.9637399+26.90000/c=+0+0#/n=4187/s=21/b=99/f=16.51/v=+3.882#B/a=LWwing2QAAAAOt68ED93g0BByddgP3cTcEHMAPAAA4QAOfOpYED93ekBBycVgP3cNcEHMAPAAA4UAOUQAED93gC1slp4UmQAAQEHJs2A/dw5wQczM8AADhAA640YQP3d/QEHJj2A/dw1wQcwA8AADgwA63xIQP3d4QEhfWA/dwktbCKeG6AAAHByzPwAAOEADrZehA/d3tAQclZYD93D3BBy5nwAAOEADrgVhA/d3dAQck1YD93BnBBysz/U2jULWwiniYtAAAAtmsED93cEBByO5gP3cEcEHKAPAAA4MAOUtCEd93cUBByO5gP3b/cEHKAAPAAA4QAOt/UED93aC1slp4tNAAAQEH13GA/dvhwQcpm8AADhAA64bwQP3drQEHI2A/dvpwQcmZ8AADhAA61wwQP3ddQEHIpWA/dvEtbCKeNDwAAHBByszwAAOFAdryjyBA/d19AQciCYD927XBBymbwAAODADrVRhA/d1xAQchdYD928XBBysz/U2jULWwini7IAAAAOUtM+ED93X0BByDpgP3bucEHKAAPAAA4UAOUtQGED93Y0BByDpgP3bzcEHKAAPA4IAOtyWED93WS1slp5FzwAAQEHHPmA/dutwQcbM8AADhgA6zcvQP3dQOEHEW2A/dudwQclA8AADgwA6zDgQP3dQOEHBvmA/duc tbCKeTNgAAHBBvszwAAOEADrBNhA/d05AQb/oYD927XBBygDwAAODADrHjhA/d1RAQb8zYD928HBByZn/U2jULWwiniDkAAAAOsQ8ED93TkBBvzNgP3bscEG+zPAAA4MAOsfgED93U0BBy6BgP3bvcEG/M/AAA4YAOstuED93Xi1slp5ebQAAQEHADWA/dvhwQcBm8AADgwA6zRwQP3daQEHA02A/dvNwQcGZ8AADgwA61JgQP3dZQEHBrWA/du8tbCKeZXMAAHBBwgDwAAOGAdrOvhA/d1JAQcJhYD926nBBwzPwAAODADrUUhA/d0IAQcM6YD923nBBxAD/U2jULWwinnAAAAAAOtYYED93Q0BBxLvgP3bYcEHGzPAAA4QAOtu4ED93S0BBxmZgP3bdcEHlzPAAA4QAOUtDsED93Qi1slp53CAAAQEHITGA/dtJwQczM8AADhAA64YAQP3dFQEHI+2A/dtRwQcZ28AADhAA64RgQP3dDQEHLzmA/dtltbCKefhAAAHBBzbwAAOEADrEB/dz1AQc1YYD92zHBB0GbwAAOFAdrb8hA/dzxQc7QYD92znBB0gD/U2jULWwinoicAAAAAAOt9GED93OUBBOEhgP3bKcEHTrmfAAA4QAOt1QED93MEBB0b9gP3bBcEHVmfaAA4QAOUtKwED93Ky1slp6pAAAQEHNTNmA/drpwQdZm/1No1EBTaNRgP3aXcEGoAP///8=#/e#/x/a=28494

Calculate CRC:

Insert the whole message except the "#X/a=28494" in the CRC calculation tool
([HTTP://WWW.TAHAPAKSU.COM/CRC/](http://WWW.TAHAPAKSU.COM/CRC/))

Inspired by [Lammert Bies' CRC Calculation page](#), which I've used many many times for my work and projects, I decided to write the same with javascript and without the 800 char limit, and here it is. You can use it as you want. Here's the calculation [source](#) written in javascript. The magic happens in `CRCMaster.Calculate()` method.

Resources for CRC calculation (except from [StackOverflow](#), and [Google](#)).
